

Over a decade of working with clients to develop integrated mobile software and solutions has led to the creation of the Allegro Retail Management Suite of mobile applications. The suite is tailored specifically to the evolving needs of tomorrow's retail leaders.

Energize the Customer Experience

Providing a differentiated customer experience in today's rapidly evolving retail environment can be greatly enhanced through the use of mobile devices supported by Allegro's Retail Management Suite.

Configurable mobile applications to support:

- Line-busting
- Self-serve check-out and price checking
- Digital signage, gift registry and mobile kiosks
- Assisted selling and clienteling

Boost In-Store Efficiency

With Allegro's Retail Management Suite, clients are able to provide their individual store locations with the tools to improve both their merchandising and inventory management.

Configurable mobile applications to support:

- PCI compliance for credit card transactions
- Receiving, cycle count and hole-checking
- Inventory replenishment, store ordering and transfers
- Merchandise, planogram and end-cap management
- In aisle printing

Optimize the Retail Supply Chain

Extend or even replace the functionality of many retail management systems with Allegro's Retail Management Suite, clients are able to improve many of their performance metrics including optimal merchandise mix, inventory turn, gross margin and comparable year-over-year operating income.

Configurable mobile applications to support:

- Shipping and receiving
- Cross-dock management
- Picking, packing and palletizing
- Inventory and allocation management
- Ad-hoc scheduling and task management

End-to-end Mobility for Real Results

The Allegro Retail Management Suite of mobile applications can empower and improve the productivity of your retail operations through enterprise-grade mobile applications run on a variety of mobile devices, scanners, tablets and smartphones.

Customer Satisfaction

Being able to provide your customers with superior customer experience can often mean the difference between customer loyalty resulting in increased business, or lost opportunities as your customers look elsewhere. Offering a consistently superior customer experience is enhanced with Allegro's Retail Management Suite of mobile applications, empowering your front-line staff with the tools they need.

Energize the Customer Experience

Line-busting

Reduce check out wait times during busy hours by using mobile scanners to pre-checkout customers before they pay for their purchases.

Self serve checkout and price checking

Improve customers ease of access to pricing information and support self serve checkout via mobile kiosks and detachable wall-mount scanners.

Digital signage, gift registry and mobile kiosks

Leverage interactive multimedia devices to assist in communicating your brand and selling your products as an extension of more traditional face to face customer interactions.

Assisted selling and Clienteling

Provide a visual and interactive means for store associates to interact with customers using enterprise smartphones, tablets and digital displays.

Boost In-Store Efficiency

PCI compliance for credit card transactions

Compliance with PCI standards for the protection of wireless information requires a secure and auditable application environment.

Receiving, cycle count and hole-checking

Real-time mobile scanners to support store level inventory management. Hole-checking and cycle counts ensure that inventory records properly reflect the actual inventory on display.

Inventory replenishment, store ordering and transfers

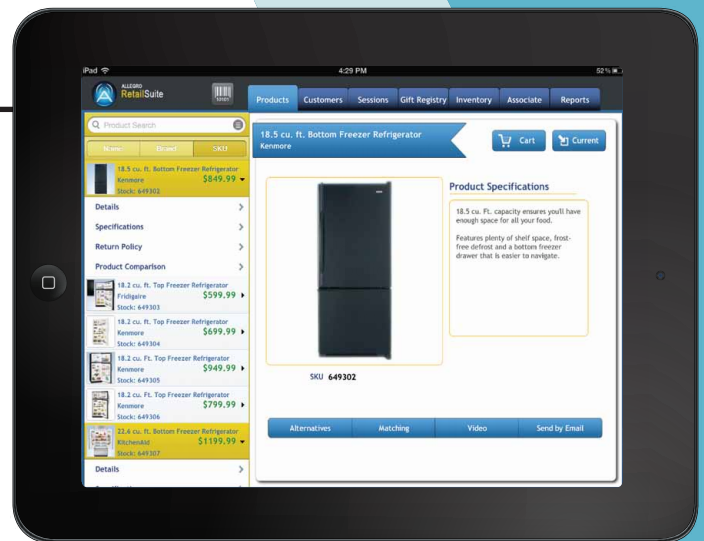

Use real-time hand held scanners for simple, efficient and accurate management and movement of inventory from location to location.

Merchandise, planogram and end-cap management

Provide information and visual cues at the point of need, in the store and on the floor, to greatly improves the efficiency, consistency and accountability of in-store displays.

In the aisle printing

The accuracy and efficiency of reprinting out-dated or damaged SKU, merchandise and shelf labels is greatly improved with mobile in the aisle scanning and printing

Optimize the Retail Supply Chain

Shipping and receiving

Scan barcodes, apply labels and update information to accurately reflect each unit's real time inventory status and location within the supply chain.

Cross-dock management

Nimble and accurate task management and inventory allocations to support cross-dock shipping and receiving.

Picking, packing and palletizing

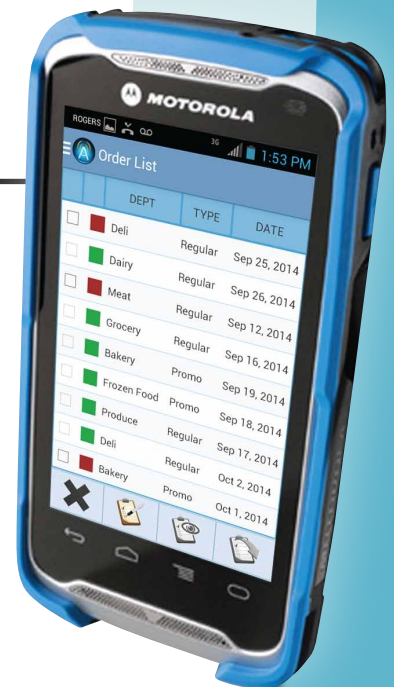

Provision of clear and accurate tasks using mobile scanners greatly improves the efficiency and accuracy of key processes.

Inventory and allocation management

Manage and allocate inventory real-time using accurate and timely inventory data.

Ad-hoc scheduling and task management

React and adjust to unplanned schedule changes and expedited shipments by using mobile devices to allocate work orders and distribute tasks.

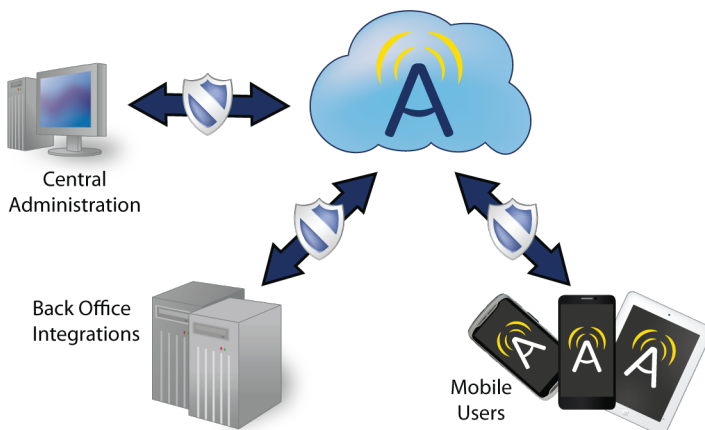

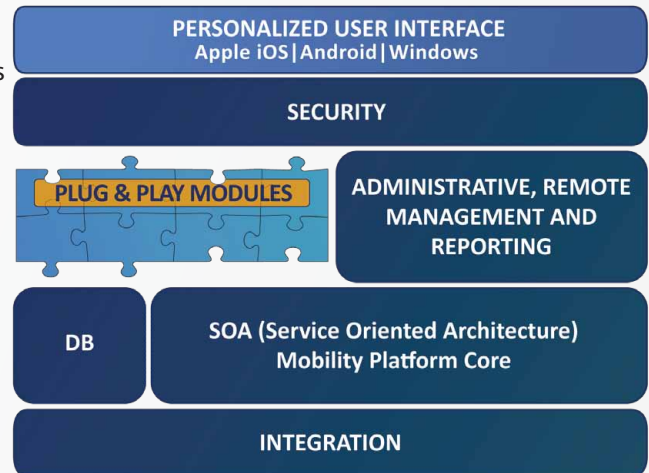

Flexible, Scalable and Secure

Each of Allegro's software suites (Field Services, Transportation and Logistics, and Retail Management) are powered by the Allegro Mobility Platform, a true enterprise-level mobile application platform offering unified security, administration, remote management, reporting and integration functions.

Allegro Mobility Platform (MDAP / MEAP - Mobile Enterprise Application Platform)

- ✓ Cross-device/OS – Windows, Apple iOS, Android
- ✓ Personalized multi-lingual user interface for your mobile users
- ✓ Advanced security functions to defend against intrusions and exposures caused by un-authorized access
- ✓ SOA-based plug & play modules to support the rapid configuration of your mobile solution
- ✓ Centralized remote management for the administration of users, software and devices
- ✓ Platform databases support the plug & play modules and record key events, transactions and user activities
- ✓ The advanced SOA (Service Oriented Architecture) core supports the platform's flexibility and scalability
- ✓ Numerous custom and pre-defined integrations including integrations certified with SAP and other systems

HOSTING & SUPPORT

Allegro's software offerings are available on a licensed or Solution-as-a-Service basis and can be hosted in the cloud, at our data center or installed at your office. Allegro offers a full portfolio of managed services to assist clients with the remote monitoring and management of their applications, end-user devices and WLAN mobile infrastructure.

About Allegro

With headquarters in Toronto, and offices in Montreal, Dallas and Rome, Allegro Mobile Solutions has earned a reputation as the leader in providing mobile solutions as a service. Allegro is certified in both ISO 9001 and ISO 14001.
